Suddha,

Attached below is a DRAFT response from Ft Meade. It is only draft and will be changing but I wanted you to have it to assist in your development. The changes will include a procedure to screen samples (in lab) before running. If the contaminant load is low enough they will be run using a 500 series method. If they are too contaminated they will be run using 8000 series. As you probably know the 8000 series may not be sensitive enough to detect concentrations at MCLs. This SOP will require the collection of an additional vial for the SVOC and VOCs probably. There will be a couple other changes as well.

We may also be collecting both pre and post treatment samples at some homes so the total number of samples collect may be going up.

The other thing this document will help you with is preparing quote packages. Anything that is not included on this document you can assume Ft Meade will not do thus, you will have to get quotes for them.

I hope to have a final document from Ft. Meade later today.

thanks for you patience as we work our through this...

Rich

Attached is a file that Stevie had and I amended for this sampling. Please take a look at it and see if I left anything out. **Ex. 5 - Deliberative**? Robin, please check the list of metals. We cannot do methane at this time, but Adam is working on adding this capability (column is on order).

Subject: Dimock Sampling

Kevin and Sue,

There is a possibility that HSCD will go out sampling next month on some home wells related to the Dimock HF issue. I briefly spoke to Rich Rupert last week and he had few details but progress is underway to outline a list of analytes and develop a sampling plan. I gave Rich both of your names as contacts for us. If there are any conference calls or more information this week I'll let you know. For now I will send you two emails that were sent to me.

Sue - would you pull together a list of parameters based on the ORD HF Study and what we recommended in the past?

We can discuss more tomorrow at the branch meeting.

Cindy
